SEPARATE URBAN WASTE COLLECTION IN THE EXHIBITION PAVILIONS DURING EVENTS

The best waste is the one we don't produce.
If we can't avoid it, we collect waste according to the rules of separate waste collection.

WHO

All Exhibitors, including catering and food and beverage service providers, are required to carefully separate their waste, applying the principles of separate waste collection, according to the operating procedures defined in the "Regulations for the Management of Urban Waste and for Soil Sanitation Services" of the Municipality of Rho, adopted in accordance with Article 198 of Legislative Decree 152/2006, which mandates municipalities to regulate the delivery, collection, and transportation of urban waste in order to ensure environmental protection.

Exhibitors and designated personnel are required to ensure proper waste separation by type and nature, using the containers located within the pavilions or in the specially equipped outdoor areas. It is the Exhibitor's responsibility to ensure waste is transported to the designated collection areas outside the pavilions, ensuring it is placed exclusively in the designated containers. Please note that it is strictly forbidden to throw waste of any kind, whether solid or liquid, into the manholes and floor drains inside the exhibition halls. This prevents damage to the technical networks and violates water protection regulations.

WHERE

In accordance with the Consolidated Environmental Law, the Exhibitor is required to ensure that all waste is properly transported to the assigned collection areas. Such materials must be disposed exclusively in the containers designated for each product fraction, ensuring perfect separation of flows to facilitate material recovery. For each event, specific plans are prepared and made available showing the exact location of the collection areas and their assignment to the individual exhibition pavilions. It is the Exhibitor's responsibility to consult this technical documentation to identify authorized drop-off points and strictly adhere to the logistics mapping established for proper urban hygiene management.

WHY

Strict compliance with waste separation procedures is a primary requirement to ensure the separate management of different product fractions. This practice is aimed at maximizing the transfer of waste to certified and controlled recovery chains, reducing the overall environmental impact of the exhibition. Exhibitors are informed that failure to comply with the disposal procedures, as well as the verified mixing of waste, constitutes a violation of current regulations. Therefore, non-compliance with these provisions will result in the application of the administrative penalties established by the environmental legislation and local regulations, without prejudice to any compensation for additional disposal costs resulting from the non-compliance of the materials delivered.

WHAT

In close collaboration with the public waste management service, a suitable supply of containers and specific disposal systems for each recoverable product fraction is set up within the dedicated collection areas. This equipment is designed to ensure the separate collection of all waste from exhibition, set-up, and dismantling activities, ensuring compliance with disposal and recovery flows. The proper placement of these logistical facilities is designed to facilitate timely disposal by exhibitors, promoting the achievement of recycling targets set by current legislation and minimizing the overall environmental impact.

The following fractions must be separated:

Any clarifications can be requested from the Environment Office of Fiera Milano

FIERA MILANO

ORGANIC FRACTION – WET AND BIOPLASTIC

Organic waste must be disposed of exclusively in the designated brown containers, taking care to store the materials loose or in bags compliant with the UNI EN 13432 technical standard.

YES -> kitchen scraps, food leftovers, tableware, cutlery, cups, and compostable products, compostable bioplastic

NO -> food still packaged in non-compostable packaging, kitchen paper, cigarette butts, plastic bags

PAPER, CARDBOARD, TETRAPAK, PLASTIC (MULTI-MATERIAL COLLECTION)

Multi-material waste must be disposed of in the designated green bins, clearly labeled "multi-material" and with a nominal capacity of 1.100 litres.

YES -> Cling film, plates, cups, cutlery, and non-compostable plastic trays, clean paper, cardboard, Tetra Pak beverage and liquid cartons, newspapers, magazines, advertising brochures, and bags for bread, fruit, and vegetables. Fold the cartons and empty any residual liquids.

NO -> receipts, plastic-coated paper, baking paper, food-soiled paper plates, food-soiled paper bags, used paper tissues

PET (POLYETHYLENE TEREPHTHALATE) PLASTIC BOTTLES

PET bottles, after removing their contents, must be disposed of in an intact and uncrushed state in the dedicated compactors located along Corso Italia. This procedure ensures the proper delivery of the polymer fractions to certified supply chains to produce RPET (Recycled Polyethylene Terephthalate).

YES -> water and soft drink bottles collected separately from other types of plastic

NO -> PET bottles containing substances other than water and soft drinksles if containing substances other than water and soft drinks

GLASS AND CANS

The disposal of waste destined for the blue container, with a nominal capacity of 240 liters, must be carried out exclusively by depositing the material in bulk. The use of any type of packaging, including polyethylene bags or other types of packaging, is expressly prohibited to ensure proper interception of the materials and prevent alteration of the mechanical sorting cycles required at authorized treatment facilities.

YES -> Glass bottles and jars, aluminum beverage cans, steel cans, and metal containers. Empty any residual liquids.

NO -> mirrors, light bulbs, ceramics, crystals, Pyrex

DRY RESIDUE

The disposal of the product fraction intended for the green bins, characterized by a nominal capacity of 1.100 liters, must be carried out exclusively using single, strictly transparent bags.

YES -> used paper napkins and tissues, rubber, ceramic, wax paper, plastic-coated food paper

NO -> all recyclable waste, all hazardous waste such as batteries, paints, neon, drugs
